

Traffic & Engagement Analysis

Short Report — Prepared for Alfido Tech

Dataset	Website Traffic Analysis (Kaggle) — bhanupratapbiswas/website-traffic-analysis, file traffic.csv
Actual content	Smart-link click analytics for music promo links: pageview / click / preview events
Records analyzed	226,278 events across 3,839 links, 3,562 tracks, 212 countries
Time period	August 19-25, 2021 (7 days)
Prepared by	Alfido Tech Data Analytics Internship Program

Scope note: despite its name, this dataset is smart-link click analytics for music promo links — not a generic web server log. It has no session ID, user ID, referrer, or page-URL field. This means **sessions, unique users, bounce rate, average session duration, and true entry/exit pages could not be computed** as originally requested. This report instead analyzes the pageview → click → preview engagement funnel, geography, and top content that the data actually supports.

Key Insights

142,015	39.2%	51.2%	3,839
Total Pageviews	Click-Through Rate	Preview Rate	Unique Links

- The funnel converts reasonably well overall: 142,015 pageviews → 55,732 clicks (39.2% CTR) → 28,531 previews (51.2% of clicks preview the track). The biggest single drop-off is pageview-to-click.
- Traffic is geographically concentrated: Saudi Arabia and India lead, with Jeddah and Riyadh as the top individual cities — a small number of markets drive most of the volume.
- One track, "Jalebi Baby" by Teshar, dominates engagement with roughly 6x the pageviews of the next-closest track.
- Click-through rate varies widely across links with similar traffic volume — from under 20% to over 85% among links with 50+ pageviews — a strong signal that page design/placement matters.
- Daily volume dipped slightly across the 7-day window (from ~35K to ~30K daily events), though the short window makes it hard to call this a firm trend.

Figure 1. Overall engagement funnel across all links, Aug 19-25, 2021.

Geography & Top Content

Figure 2. Top 10 countries by pageviews.

Figure 3. Top 10 tracks by pageview/click/preview volume — "Jalebi Baby" leads by a wide margin.

CTR Range Among High-Traffic Links (50+ pageviews)

Best-converting	Track	Pageviews	Clicks	CTR
1	Pakistan Zindabad	110	97	88.2%

2	Love Tonight - Edit	53	37	69.8%
3	love u lately	57	39	68.4%

Weakest-converting

Rank	Track	Pageviews	Clicks	CTR
1	econto	148	28	18.9%
2	Worship Instrumental	88	17	19.3%
3	Astronaut In The Ocean	77	15	19.5%

Action Items for Alfido Tech

1. Instrument session and user tracking.

The biggest gap is the lack of session/user IDs. Adding even an anonymous session cookie would unlock bounce rate, session duration, and true user-journey analysis for future reporting.

2. Replicate what high-CTR links are doing right.

CTR ranges from under 20% to over 85% among similar-traffic links. Audit the page layout, preview snippet, and call-to-action on top-CTR links (e.g. "Pakistan Zindabad" at 88%) and apply those patterns to weaker performers (e.g. "econto" at 19%).

3. Double down on top markets while testing expansion markets.

Traffic concentrates in Saudi Arabia and India, led by Jeddah and Riyadh. Localize promo pages for these markets, while piloting small campaigns in adjacent countries with lower but non-zero traffic.

4. Design a "hit-track halo" strategy.

"Jalebi Baby" drives a hugely disproportionate share of traffic. Use its page to cross-promote other tracks/artists via related-track modules or artist-follow prompts, converting one-hit visitors into repeat visitors.

5. Add referrer and campaign-source tracking to future link releases.

There's currently no way to attribute traffic to social media, playlist placements, paid ads, or organic search. Even simple UTM-style parameters on each smart link would let Alfido Tech tie the funnel above back to specific marketing spend.
