

Task 3: Traffic & Engagement Analysis

Kaggle — bhanupratapbiswas/website-traffic-analysis (226,278 events, 3,839 links, Aug 2021)

142,015	39.2%	51.2%	212
Pageviews	Click-Through Rate	Preview Rate	Countries

Executive Summary

The uploaded file turned out to be smart-link click analytics for music promo links (pageview / click / preview events) rather than a generic web server log - it has no session ID, user ID, referrer, or page-URL field. Sessions, bounce rate, and true entry/exit pages could not be computed as a result. The analysis instead covers a pageview-to-preview engagement funnel, geographic breakdown, and top-performing content. Deliverables: full Jupyter notebook and short PDF report (with the scope limitation flagged on page 1).

Key Findings

- Funnel: 142,015 pageviews -> 55,732 clicks (39.2% CTR) -> 28,531 previews (51.2% preview rate).
- Traffic concentrated in Saudi Arabia and India, led by Jeddah and Riyadh.
- One track ("Jalebi Baby") drives ~6x the pageviews of the next-closest track.
- CTR ranges from ~19% to ~88% among links with comparable (50+) pageviews.

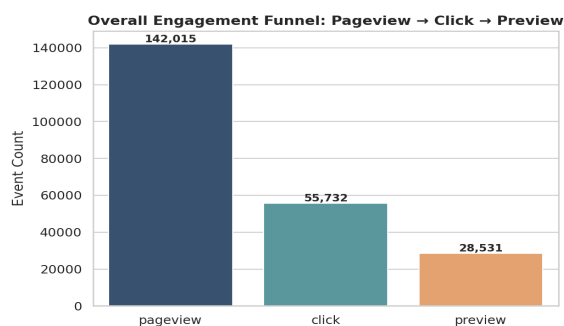

Fig 1. Overall engagement funnel.

Top Recommendations

- Instrument session/user tracking to unlock bounce rate & journey analysis going forward.
- Replicate high-CTR link page design on weaker-converting links.
- Double down on top markets (Saudi Arabia, India) while testing adjacent markets.
- Cross-promote other tracks from the dominant hit-track's page.
- Add referrer/UTM tracking to attribute traffic to marketing campaigns.
